

Case Study: Hospital Flooring

Brief Description

Quest were asked to install a new flooring system for a brand new facility at a Hospital designed to provide a modern and nation-leading medical resource.

Overview

Being one of the most environmentally friendly buildings in the country, Quest were called in to deliver a seamless, hygienic, hard-wearing and decorative floor to over 4,000m² in various high trafficked areas with 3,600 linear metres of coving.

The contract had an extremely tight deadline and strict working parameters. Quest were able to source all of the flooring quickly and efficiently to ensure a first class installation within the eight-week programme.

The site was a live working building with restricted access and so as each area was released it had to be completed by two specialist teams of 6 layers and 6 sealers working consecutively on site. Due to the cold temperatures, the floors had to be laid in heated zones.

The project included 12 operating theatres, two main kitchens, corridors and various side rooms. Hygiene was paramount, which meant the system had to be slip resistant and flat to within 1mm tolerances. The materials were all from one batch to maintain a perfect colour match and a uniform these throughout the hospital.
